Tom

Thank you for the update. I am finalizing our sampling report and will forward a copy when completed. Essentially all samples collected were non detect. We finished our sampling March 30<sup>th</sup>, since we understood the remediation was completed. Was there any sampling performed after the 3/30 at Hammond Crib?

Al

Alan,

I just got word from the OSC that they are concluding their activity at BP Whiting and that the Coast Guard will oversee BP, who will continue to skim off any oil in the oil/gas separator, inspect the immediate area of the outfall which is boomed off, and do routine sweeps of the shoreline. I believe our NPDES enforcement program is going to do an inspection of the separator and outfall some time next week.

Tom
